Made in Germany ►

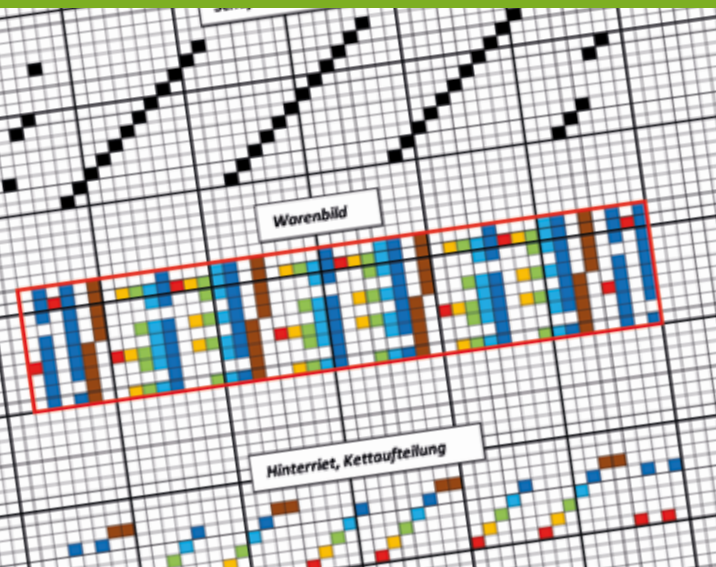

The historic facade of our main plant in Gütersloh harbours state-of-the-art manufacturing facilities and innovative machine technology.

Technological competence

Güth & Wolf was founded by Konrad Güth und Wilhelm Wolf in 1887 as a tape and webbing weaving enterprise. The company remains in family hands today. In our three plants in Gütersloh and Friesoythe (Oldenburg), we produce over one million meters of textile narrow fabrics every day.

State-of-the-art technical standards and a leading-edge development department are our guarantee for high-quality, innovative products. Over 320 qualified employees are working every day to satisfy our customers' wishes.

Weave design ▲

We are your specialist partner for exclusive custom solutions, patent solutions, utility models and prototypes.

Weaving ►

The past meets the future: our weaving processes operate on the same principle as centuries ago, though of course significantly modernised machine technology.

◀ Dyeing and finishing

Depending on the specific requirements, the woven textile narrow fabrics are continually dyed, digitally printed or receive an abrasion-resistant or fire-retardant finish in our final processing.

Modern warping systems

Mounted in arrays of up to 520 spools, the threads are wound on large aluminium warp beams with a diameter of 1,000 mm
▼ as a parallel skein.

Quality assurance

The satisfaction of our customers is the most important standard for assessing our product quality. We are not satisfied unless you are. And we look forward to every new challenge.

Our quality management system supports our processes. We can verify the optimum compliance with our standards at all times and implement improvements on the basis of objective metrics and audits. Our enterprise is certified according to DIN EN ISO 9001:2015 and IATF 16949:2016.

▲ Quality testing

We test the tearing strength, stretching, abrasion-resistance, shrinkage and burning behaviour of our finished tapes and webbings according to defined criteria.

GÜTH & WOLF

BAND- UND GURTWEBEREIEN

Every day Güth & Wolf produces over one million meters of textile narrow fabrics, in widths ranging from 3 mm to 600 mm. We use around 200 different yarn types, particularly high-strength yarns like Twaron®, Vectran® and Dyneema®.

Several thousand different product types are woven, braided, knitted or raschel-knitted in our plants. Our customers come from a variety of industries, such as the automotive sector, load securing, composites, security and military equipment.
