

TISAX® (Trusted Information Security Assessment Exchange) is a standard developed by the German Association of the Automotive Industry (VDA) with the aim of ensuring the security of information in companies. With TISAX® the ENX Association helps to increase the acceptance of information security assessments in the automotive industry on behalf of the VDA. The TISAX® assessments are carried out by testing service providers whose qualification is regularly verified.

Güth & Wolf GmbH attaches great importance to confidentiality, availability and integrity of information therefore we have taken a number of precautionary measures based on the VDA questionnaire for information security in its latest version (VDA ISA).

The TISAX® test results are not intended for the broad public. The results are only accessible via the ENX portal by registered companies:
